

Odoo 20 Installation on Ubuntu 24.04 LTS

Commands-only reference

Run the commands in order. Replace placeholders such as *username*, *server_ip*, *passwords*, and *port_number* with your own values.

1. Log in to the Ubuntu server

```
ssh username@server_ip
ssh -p port_number username@server_ip
ssh -i /path/to/your/key.pem username@server_ip
lsb_release -a
```

2. Update the Server

```
sudo apt-get update
sudo apt-get upgrade -y
```

3. Secure the Server

```
sudo apt-get install -y openssh-server
sudo apt-get install -y fail2ban
sudo systemctl start fail2ban
sudo systemctl enable fail2ban
sudo systemctl status fail2ban
```

4. Install Packages and Libraries

```
sudo apt-get install -y python3-pip python3-venv python3-dev \
    git build-essential libxml2-dev libxslt1-dev zlib1g-dev \
    libsasl2-dev libldap2-dev libssl-dev libffi-dev \
    libjpeg-dev libpq-dev liblcms2-dev libblas-dev \
    libatlas-base-dev npm node-less
sudo apt-get install -y nodejs
nodejs --version
sudo ln -s /usr/bin/nodejs /usr/bin/node
sudo npm install -g less less-plugin-clean-css
```

5. Set Up the Database Server

```
sudo apt-get install -y postgresql postgresql-client
sudo su - postgres
createuser --createdb --username postgres --no-createrole --superuser --pwprompt odoo20
exit
```

6. Create a System User for Odoo

```
sudo adduser --system --home=/opt/odoo20 --group odoo20
```

7. Download Odoo 20 Community Edition from GitHub

```
sudo apt-get install -y git
sudo su - odoo20 -s /bin/bash
cd /opt/odoo20
git clone https://github.com/odoo/odoo.git --depth 1 --branch 20.0 --single-branch .
ls
```

```
exit
```

8. Install Required Python Packages

```
sudo apt install -y python3-venv
sudo python3 -m venv /opt/odoo20/venv
sudo -s
cd /opt/odoo20
source venv/bin/activate
pip install --upgrade pip
pip install -r requirements.txt
deactivate
exit
```

9. Install wkhtmltopdf

```
sudo wget https://github.com/wkhtmltopdf/wkhtmltopdf/releases/download/0.12.6.1/wkhtmltox_0.12.6.1-2.jammy_amd64.deb
sudo dpkg -i wkhtmltox_0.12.6.1-2.jammy_amd64.deb
sudo apt install -f
wkhtmltopdf --version
```

10. Configuration File

```
sudo cp /opt/odoo20/debian/odoo.conf /etc/odoo20.conf
sudo nano /etc/odoo20.conf
```

10A. Odoo Configuration

```
[options]
admin_passwd = your_admin_password
db_host = localhost
db_port = 5432
db_user = odoo20
db_password = your_database_password
addons_path = /opt/odoo20/addons
logfile = /var/log/odoo/odoo20.log
```

10B. Permissions and Log Directory

```
sudo chown odoo20: /etc/odoo20.conf
sudo chmod 640 /etc/odoo20.conf
sudo mkdir -p /var/log/odoo
sudo chown odoo20:root /var/log/odoo
```

11. Create a Systemd Service

```
sudo nano /etc/systemd/system/odoo20.service
```

11A. Systemd Service Configuration

```
[Unit]
Description=Odoo 20
Documentation=https://www.odoo.com
[Service]
Type=simple
User=odoo20
Group=odoo20
ExecStart=/opt/odoo20/venv/bin/python3 /opt/odoo20/odoo-bin -c /etc/odoo20.conf
```

[Install]

WantedBy=multi-user.target

12. Start the Odoo Service

```
sudo systemctl daemon-reload
```

```
sudo systemctl start odoo20
```

```
sudo systemctl enable odoo20
```

```
sudo systemctl status odoo20
```

13. Access Odoo in the Browser

http://your_server_ip:8069

14. Check the Odoo Logs

```
sudo tail -f /var/log/odoo/odoo20.log
```

```
sudo journalctl -u odoo20 -f
```
